## PRO FOAM KIT

For use with:

**Emulsifiers** or **Aerating Texture Enhancers**

The **Pro Foam Kit** is a device which creates stable and homogeneous foams in seconds, without using a blender.

Dissolve an emulsifier such as Natur Emul or an aerating agent, for example, into a liquid.

Then, pour into a tall, narrow container.

Place the tube of the kit into the liquid and, in a few seconds, the device will produce as much foam as you need (you can control the amount).
